

Analysis Of Fish Species

By Nigel Karikari

About Me

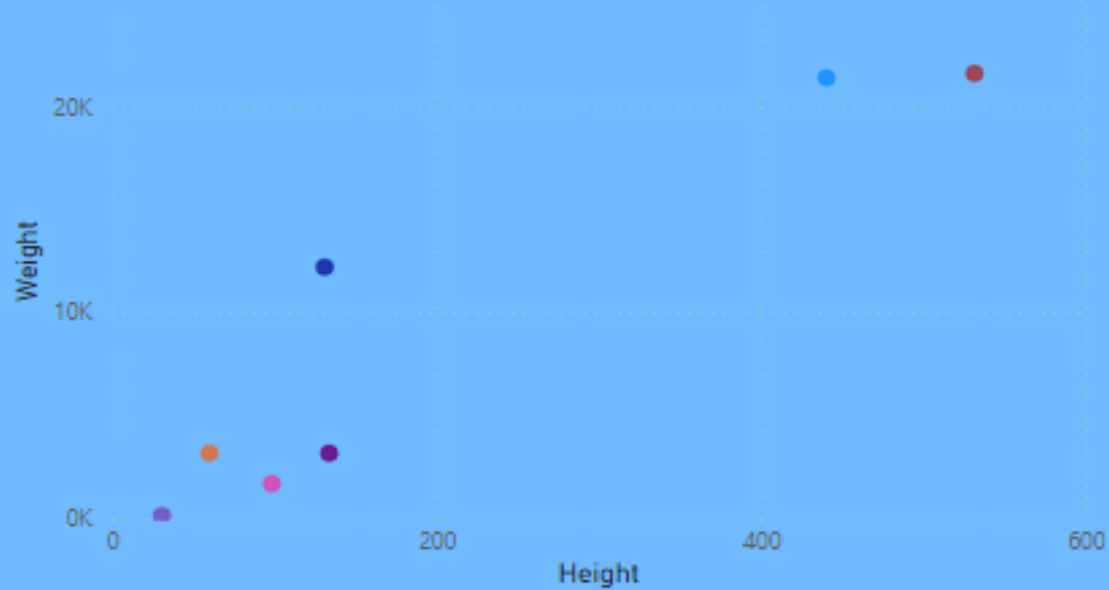

My name is Nigel Karikari, a Ghanaian data analyst with a background in Cybersecurity and mobile app development.

I work remotely as a freelance data analyst and mobile app developer. Turning data into actionable insights fascinates me.

Fish Species : Height Vs Weight

Species ● Bream ● Parkki ● Perch ● Pike ● Roach ● Smelt ● Whitefish

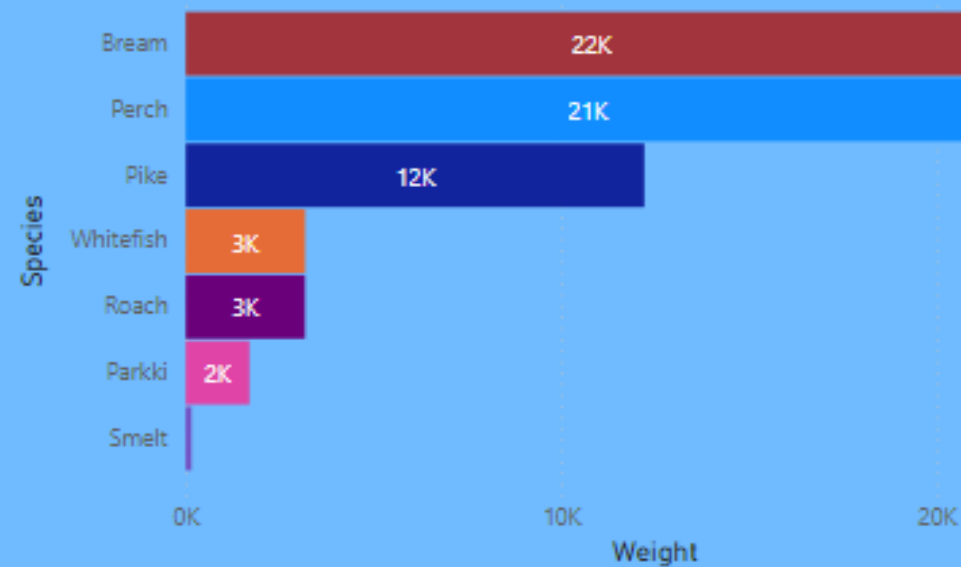

As a group, the bream species have the largest weight whereas, the smelt species are the smallest.

The smelts are also the least in comparison to the other species, whilst the perch species have the largest population.

Averagely, The pikes have the greatest weight, whiles the smelts weigh the least.

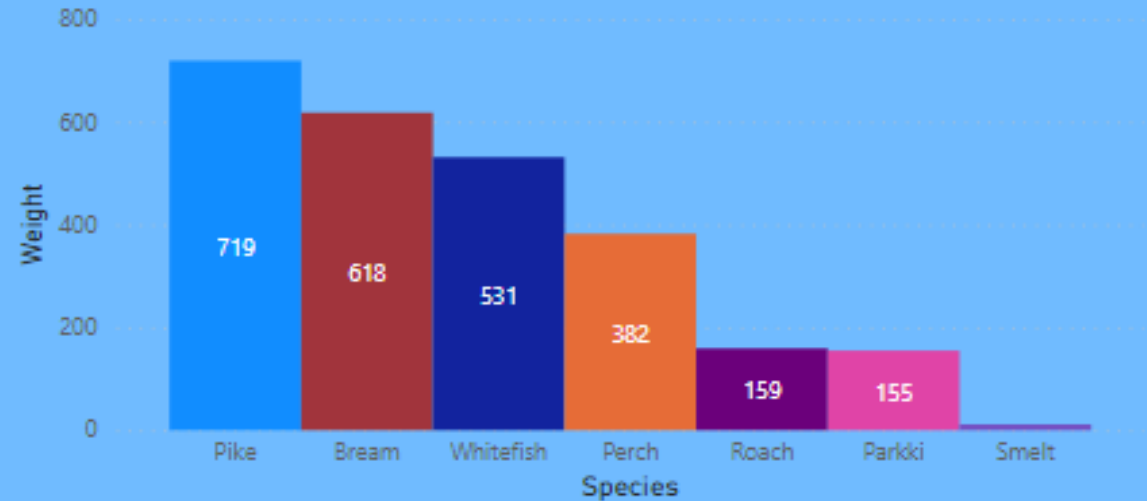

Fish Species : Collective Weight

Species ● Bream ● Perch ● Pike ● Whitefish ● Roach ● Parkki ● Smelt

Average Weight Of The Fish Species

Species ● Pike ● Bream ● Whitefish ● Perch ● Roach ● Parkki ● Smelt

Summary Of Key Insights

- Averagely, pikes have the greatest weight whereas smelts weigh the least.
- There is a strong positive correlation between the weight and height of the fish species.
- As a group, breams have the greatest weight whiles the smelts are least.
